Step by step instructions on getting rid of pop-up and banner ads on the Paltalk chat program. (To my knowledge this only works if you are using Internet Explorer. It is quite possible if you are a Netscape or Firefox user these steps may not work).

1. Open Internet Explorer.

2. Left click once on the Tools tab at the top.

3. Scroll down then left click once on Internet Options.

4. Left click once on the Security Tab.

5. Left click on the red circle with the white line in the middle (Restricted Sites icon).

6. Then left click once on the Sites button. This will bring up a window that says Restricted

Sites at the top . You will notice a blank field, a long rectangle.

7. In that blank field, type in the following: paltalk.com

8. Then you will left click once on the Add button.
9.Continue adding the following sites:
>Type in ad.yieldmanager.com
> click 'Add'
then type in > ads.addynamix.com
>Click 'Add'
then type in > advertising.paltalk.com
>Click 'Add'
then type in > banners.addynamix.com
>Click 'Add'
then type in > client.paltalk.com
>Click 'Add'
then type in > exit.paltalk.com
>Click 'Add'
then type in > paltalk.com
>Click 'Add'
then type in > skype.com
>Click 'Add'
10.Click OK at the bottom of that window. This will bring you back to the main Internet Options window.
11. Click OK. That's it!
now ads will be blocked ,Inshaa Allah
